The amendment filed January 18, 2007 has been entered and made of record as paper no. 0107.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 to 7 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' prior art figure 1 in view of Chang et al (US 6,696,717 B2).

Applicants' prior art figure 1 discloses all the subject matter claimed except for the gate being formed by dual work function materials. Chang discloses a gate electrode having a first region (116) filled with polysilicon and a second region (124) formed on top of the first region. Since the gate comprises two different materials, it is inherently formed by dual work function materials. Therefore, it would have been obvious to one of ordinary skill in the art to form a dual work function materials in Applicants' prior art figure 1 as taught by Chang in order to improve the vertical MOSFET transistor.

In re claim 6, the upper (124) and lower (116) layer gate materials in Chang comprises polysilicon.

Applicant's arguments filed January 18, 2007 have been fully considered but they are not persuasive.

Claim 1 is broad enough to include "gate 1" and "gate 2". In response to applicant's argument that the references fail to show certain features of applicant's

Art Unit: 2818

invention, it is noted that the features upon which applicant relies (i.e., "Gate 1 is shown to be beside the spacer. The gate controlling the channel is made of one material only" and "the gate controlling the channel comprised of Gate 2 and Gate 3 being made of two materials") are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
